### **DETAILED ACTION**

This is the second non-final Office Action for the serial number 10/823,956, LOCKING DEVICE OF SEAT TRACK FOR VEHICLES, filed on 4/13/04.

#### ***Drawings***

The drawings were received on 9/15/05. These drawings are approved.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by  
US Patent # 6,354,553 to Lagerweij et al.

Lagerweij et al. teaches a locking device (32) of a seat track comprising a fixed rail (19) having pin holding holes (40) and a movable rail (16). The movable rail being adapted to be locked to or unlocked from the fixed rail by making use of the locking device. The locking device comprises operating pins (30-31) mounted to a side wall of the movable rail (figure 3) by penetrating through pin bracket fixing holes (figure 3, 43) formed at the side wall. The pins pass through pin penetrating holes (figure 1 shows the pins, 36-38, insert through the movable rail and fixed rail) of the movable rail and pin holding holes of the fixed rail. Each of the operating pins having an elastic support (25,26) for elastically supporting associated one of coil springs and a

Art Unit: 3632

tapered end (see figure 4) provided at one side thereof for facilitating insertion of the operating pins through the pin penetrating holes of the movable rail.

***Allowable Subject Matter***

Claims 2-3 and 5-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

In regard to claims 2-3, the prior art fails to teach the device comprises a pin bracket having pin perforating holes for allowing the operating pins, which are elastically supported by the coil springs, to move to the left or right. In regard to claims 5-6, the prior art fails to teach a pin actuator having pin holding portions used to fix the elastic supports of the operating pins by coming into contact with them.

***Response to Arguments***

Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***
